

SEVEN MEDICARE ADVANTAGE BENEFITS AMERICANS LOVE

It's clear that Medicare Advantage offers a wide range of benefits. From wellness programs to dental care, every additional benefit plays a crucial role in helping Americans lead healthier and happier lives. So, which ones do Medicare Advantage beneficiaries love? In partnership with technology and media company *Morning Consult*, we surveyed¹ approximately 1,000 seniors on Medicare Advantage and here's what we found:

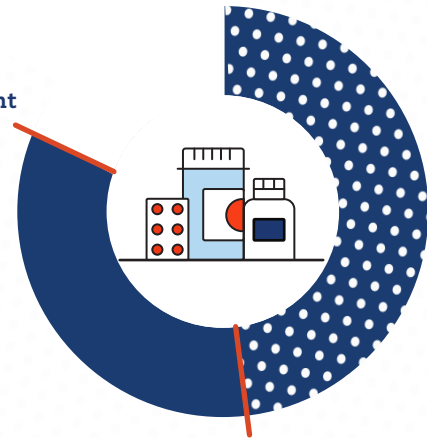

90 percent

61 percent

Seniors are extremely happy with preventive services. **In fact, 90 percent of seniors reported being satisfied and 61 percent were very satisfied.** These services include screenings, vaccines, and testing that enable Medicare Advantage beneficiaries to detect health conditions early and treat them before they become larger issues.

84 percent

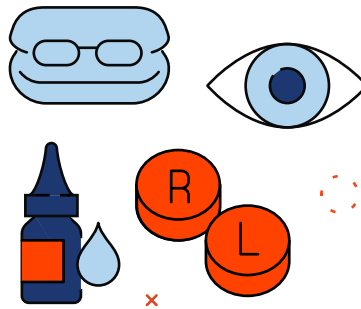

47 percent

Prescription drugs can be costly, especially for Americans who are 65 plus and have a limited budget. Not surprisingly, **84 percent of seniors said they're satisfied with this benefit and 47 percent reported they were very satisfied.**

Wellness programs help Medicare Advantage beneficiaries access home care resources and groceries to encourage them to lead a healthy lifestyle. For 77% of participants, wellness programs are an important part of their coverage.

Unlike traditional Medicare, Medicare Advantage caps out-of-pocket costs. This helps beneficiaries who make less than \$2,000 a year access stable health care services, and has **67 percent satisfaction among beneficiaries.**

Most Medicare Advantage plans offer comprehensive vision care so beneficiaries can get glasses and eye exams. More than half of beneficiaries (**56 percent**) value their vision and eye care benefits.

Medicare Advantage plans also provide coverage for hearing aids, hearing exams and dental care like annual cleanings. A combined **69 percent satisfaction rate** shows the value of these additional benefits.

More than 20 million Americans depend on Medicare Advantage for reliable and affordable health care. Our findings show the program is giving beneficiaries the coverage benefits that they want and need.
